A closure notice leaves a planning gap

28 September 2026

17

scheduled centre closures

1,025

listed food stalls inside those centres

A coordinator still needs to decide where temporary support is feasible.

The coordinator's working view

Test cleaning changes

Compare nearby hawker coverage before funding support.

Inspect the assumptions

Census 2020
800 m straight line
Subzone points

Actual hosted application. Cleaning-date changes are hypothetical. Area exposure is a screening proxy.

Five public sources, visible uncertainty

Official source	Coverage	Role in the model
NEA closure calendar	2026, 123 centres	Dates, coordinates, stall counts
SingStat census	2020, 332 subzones	Resident and senior counts
URA planning areas	2019, 55 areas	Area scope and grouping
URA subzones	2019, 332 boundaries	Geographic joins and points
SingStat / NEA waste	2000–2025 national series	Context only

507 resolved closure intervals

32 quarantined date records

Databricks architecture

Layer	Databricks component	What the run records
Ingestion	Serverless Lakeflow Job	Official responses and checksums
Bronze / Silver	Delta tables in Unity Catalog	Raw archive, typed rows, quarantine
Gold	Published snapshot and SQL views	Access model, allocations, audit
Evaluation	MLflow experiment	Parameters and baseline comparisons
Delivery	Databricks App + Firebase site	Same publication; private proposals

Workspace execution verified

12 quality gates. 9 cloud scenarios. Published data powers the public app.

A publication record exposes completed outputs. A failed run cannot silently replace the current snapshot.

Capacity limits the September 28 proposal

Objective improvement over largest-demand-first

450

**planned meals at both
S\$3,000 and S\$6,000**

3 localities × 150 meals
S\$2,700 allocated
More capacity changes the
ceiling.

15 / 15 unique scenarios passed an independent constraint audit

A proposal carries its assumptions into review

Before any service runs

Confirm resident need and accessible routes.

Verify the venue, operator, meal cost and capacity.

Save the decision record.
Export PDF, CSV or JSON.

YOUR COORDINATION BRIEF

28 September community continuity

JSON ↗

① A reviewed plan is a planning proposal. It does not confirm an available venue, a committed operator, validated demand, or a booked service.

Planned meal capacity

225

Assumed uptake, not people served

Proposed daily cost

S\$1,500

S\$0 unallocated budget

Proposed localities

2

Venue availability requires verification

ALLOCATION PROPOSAL

Where to coordinate

1	Clementi West Clementi	100 planned meals	S\$700 daily cost
2	Clementi Woods Clementi	125 planned meals	S\$800 daily cost

Subzone points represent proposed localities. They are not verified venues. Resolve access, staffing, capacity and dietary requirements before any delivery.

REPRODUCIBLE BY DESIGN

The assumptions

Planning area	All Singapore
Daily budget	S\$1,500
Meal uptake	5% assumed
Meal cost / setup	S\$4 / S\$300
Capacity per locality	150 meals
Maximum localities	3
Access / senior weight	800 m / 2+
Assumed rescheduled closures	0
Model version

One operator pilot tests the business

Buyer hypothesis

Estate operators and funded community organisations

The paid job: prepare a reliable closure plan and reduce coordination time.

S\$1,000

scoped pilot

S\$250–500

monthly organisation
subscription hypothesis

The data is public. Defensibility would come from verified capacity and a workflow operators choose to reuse.

The next test is an operator's decision

1 operator
1 scheduled closure
4–6 weeks

Prospective pilot target

30%

less preparation time,
with no increase in critical
omissions

Every venue verified before use.
Support time and repeat payment measured.
